Key facts & context

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

WHAT MYSA DOES

Mysa provides AI-powered accounts payable and finance automation. Its offering includes Accounts Payable, Integrated Banking, AI Accounting and Expense Management. It targets mid-sized businesses, D2C and manufacturing companies and fintech and SaaS companies, among other segments, with India as the named market. The revenue model is subscription, sold to enterprise customers through enterprise selling.

CURRENT POSITION

Mysa is a Pre-Series A-stage company, founded in 2023, based in India. No customer commitment has been disclosed yet; the commercial case rests on the product and the need it addresses. It has completed two financings between 2025 and 2026. A financing event, undated was also reported; its completion has not been confirmed. The company is led by its three-person founding team (CEO and CTO).

COMPANY PROFILE

Founded	2023	Headquarters	India
Stage	Pre-Series A	Sector	Fintech
Sub-sector	AI powered finance operations and business banking software	Customer model	B2B, enterprise customers, enterprise sales
Revenue model	Subscription, recurring	ICP	Chief Financial Officer, finance head, controller, accounts-payable leader, or business owner responsible for finance-process automation
Target customers	Mid-sized businesses, D2C and manufacturing companies, fintech and SaaS companies, B2C and quick-commerce businesses and multi-outlet restaurants	Core technology	Artificial Intelligence
Website	www.mysa.io		

PRODUCTS & SERVICES

- 1 Accounts Payable** - Automates procurement-to-payment workflows, including invoice processing, approvals, and supplier payments
- 2 Integrated Banking** - Connects business banking accounts with finance workflows for centralized payment and cash-management operations
- 3 AI Accounting** - Uses artificial intelligence to automate accounting tasks and connect accounting workflows with business finance data
- 4 Expense Management** - Automates business expense workflows, including expense capture, review, approval, and accounting coordination

COMPANY TIMELINE

Date	Event
Undated	Financing event, undated (completion not confirmed).
2023	Company founded.
February 2025	Seed round, USD 2.8m.
January 2026	Pre-Series A, USD 3.4m.
January 2026	In January 2026, coverage identified Mysa customers including Dhan, Swish, DrinkPrime, Vaaree, Handpickd, Wint Wealth and other Indian businesses.
January 2026	In January 2026, Mysa stated that new capital would support AI-enabled procurement, UPI-led expense management and a corporate credit-card product.
January 2026	By January 2026, Mysa had launched multi-bank connectivity across 15+ Indian banks, granular AP approvals and cost-center controls, and automated expense management.

Founder & team

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

Founding team 3 (all described by the company as co-founders)

FOUNDER DETAILS

Arpita Kapoor CEO · Co-founder

Education Communication — Indian Institute of Information Technology and Management Kerala (2013); Communication — ABV - Indian Institute of Information Technology and Management (2013); Delhi Public School Vasant Kunj (2008); DPS Vasant Kunj (2008); St. James School (2006)

Past startup experience Co-Founder & Chief Executive Officer of Mech Mocha (2013–2020), acquired by Flipkart

FOUNDER–MARKET FIT

Kapoor has co-founded or led other ventures (Co-Founder & Chief Executive Officer of Mech Mocha, acquired by Flipkart), experience relevant to building an early-stage company. Formal training in DPS Vasant Kunj complements this.

Mohit Rangaraju Product · Co-founder

Education Communication — ABV - Indian Institute of Information Technology and Management (2013); Indian Institute of Information Technology and Management Kerala (2013); St. Gabriel's High School, Kazipet, Warangal (2006)

Past startup experience Co-Founder / Product Head of Mech Mocha (2013–2020), acquired by Flipkart

FOUNDER–MARKET FIT

Rangaraju has co-founded or led other ventures (Co-Founder / Product Head of Mech Mocha, acquired by Flipkart), experience relevant to building an early-stage company.

Ashutosh Panigrahi CTO · Co-founder

Education Master of Science, Design — Manipal Academy of Higher Education (2013); Bachelor of Technology, Computer Science — National Institute of Science and Technology (2007); Khallikote Junior College, Berhampur (2003); Matrusri Anglo Vedic School (2001)

Experience Architect, CRED (2019–2023); Senior Software Engineer II, Uber (2019); Architect, Associate Architect, Technical Lead, and Senior Software Engineer, Myntra (2013–2019); Senior Software Engineer, Sprinklr (2011–2012); Software Engineer II, Stratify (2009–2011)

FOUNDER–MARKET FIT

Ashutosh Panigrahi's ten years at Uber, Myntra and Sprinklr gave experience in the software and data sector, directly relevant to a company building AI-powered accounts payable and finance automation. Panigrahi's background in engineering bears directly on leading technology and product development as CTO.

KEY MANAGEMENT MEMBERS - OTHER THAN FOUNDERS

Name	Position	Relevant responsibility
Mohit Jain	CBO	As stated in the role title
Sai Krishna	Head of Finance	Finance

TEAM–MARKET FIT

The founding team combines sector experience from Uber, Myntra, Sprinklr and Stratify with engineering backgrounds. For a Pre-Series A-stage software company, the roles and prior experience visible today cover product engineering. Prior experience in sales and go-to-market, customer success and finance is not visible from the founders' backgrounds and should be clarified.

MANAGEMENT COVERAGE

Senior roles are held by the three-person founding team (executive leadership and technology) and 2 further executives. As the company scales, execution depends increasingly on repeatable sales, customer success and engineering management. The depth of management below the founders in these functions should be clarified with management.

INFORMATION TO PREPARE

1. Current headcount by function and the management responsibilities below the founders.
2. Board and advisory composition.
3. Key hires planned for the next 12-18 months and the functions they cover.

Product & technology

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

WHAT MYSA IS DEVELOPING

It is developing AI-powered accounts payable and finance automation, combining Accounts Payable, Integrated Banking, AI Accounting and Expense Management into one offering.

PRODUCT PORTFOLIO

#	Product / component	What it does	Primary use
1	Accounts Payable	Automates procurement-to-payment workflows, including invoice processing, approvals, and supplier payments.	Accounts payable automation for mid-sized businesses.
2	Integrated Banking	Connects business banking accounts with finance workflows for centralized payment and cash-management operations.	Centralized banking and payment operations for businesses using multiple Indian banks.
3	AI Accounting	Uses artificial intelligence to automate accounting tasks and connect accounting workflows with business finance data.	Accounting automation for mid-sized businesses.
4	Expense Management	Automates business expense workflows, including expense capture, review, approval, and accounting coordination.	Employee and business expense management across multi-location and growth-stage businesses.

POSITION IN THE VALUE CHAIN

Mysa operates as an end-user finance-operations software provider and system integrator.

PRODUCT & TECHNOLOGY DIFFERENTIATION

Mysa's approach integrates Accounts Payable, Integrated Banking, AI Accounting and Expense Management into one platform rather than supplying a single component.

CORE TECHNOLOGY

The system combines one elements: AI-powered SaaS combining invoice scanning, accounting automation, workflow orchestration, banking and ERP integrations, reporting, and audit trails to reduce manual finance operations. Component features described by the company: Accounts Payable (AI invoice scanning, procurement workflow automation, invoice approvals, payment processing, audit trails); Integrated Banking (multi-bank connectivity, integrated payments, banking workflow integration, transaction visibility); AI Accounting (AI-assisted accounting, automated data capture, accounting workflow automation); AI Accounting (ERP integrations, reports and insights, audit trails).

WHY NOW?

Regulatory digitisation → GST e-invoicing and 30-day reporting rules increase automation demand. Mysa's offering is built on this progress.

INTELLECTUAL PROPERTY

No patent position is established for Mysa; whether its software, data and algorithms are protected by patents, held as trade secrets or owned jointly with research partners requires confirmation.

INFORMATION TO PREPARE

1. Ownership of intellectual property, including results developed with research partners.
2. The next technical milestone and its expected date.

Validation & market signals

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

VALIDATION POSITION

No customer commitment has been disclosed yet; Mysa's external validation so far comes from the product itself. The next transition is a first customer commitment - a pilot, letter of intent or order.

COMMERCIAL TRACTION

No commercial metrics have been disclosed; for a Pre-Series A-stage software company the relevant measures are customers, ARR or MRR, retention and expansion.

NEXT VALIDATION MILESTONE

A first paying customer or a paid pilot.

INFORMATION TO PREPARE

1. Customer engagements to date: pilots, letters of intent or orders, with counterparty type and status.

Market opportunity

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

MARKET DEFINITION

India's finance-automation market serves businesses seeking cloud software for accounts payable, procurement, accounting, expenses, banking connectivity, compliance, and real-time financial control. The direct market is the operators who have this need - mid-sized businesses, D2C and manufacturing companies, fintech and SaaS companies and B2C and quick-commerce businesses.

TARGET CUSTOMER & BUYER

Target customers	Mid-sized businesses, D2C and manufacturing companies, fintech and SaaS companies, B2C and quick-commerce businesses and multi-outlet restaurants
ICP	Chief Financial Officer, finance head, controller, accounts-payable leader, or business owner responsible for finance-process automation
Economic buyer & budget	The CFO, finance head, or controller signs from the finance-operations or software budget when manual processing, control gaps, or growth create urgency
End users	Accounts-payable teams, accountants, finance controllers, procurement teams, expense approvers, and business administrators
Buying trigger	Rapid business growth, rising invoice and expense volumes, fragmented banking or ERP systems, manual approval bottlenecks, and increasing GST or e-invoicing compliance requirements
Target markets	India

INITIAL MARKET WEDGE

India, the home market, is the first named market. The company has not stated which segment and geography it will prioritise, or why.

DEMAND DRIVERS

- Scale and cost pressure → D2C, quick-commerce, manufacturing, and restaurants need faster invoice processing across suppliers and outlets.
- Cloud and payment integration → APIs, UPI, banking connectivity, and ERP integrations make continuous finance automation more practical.

ADOPTION BARRIERS

- Legacy ERP integration, data-quality and interoperability problems, SME price sensitivity, cybersecurity and data-governance concerns, and fragmented finance processes can delay adoption. India's e-invoicing requirements also increase implementation and compliance complexity.

MARKET SIZE & ECONOMICS

The company sells recurring SaaS subscription, potentially supplemented by usage-based charges for banking or payment workflows; specific pricing is not available. Bottom-up, the direct opportunity is addressable accounts × annual contract value; these inputs have not been disclosed, so no market size is stated.

MARKET ACCESSIBILITY

Buyers are identifiable: operators of mid-sized businesses, D2C and manufacturing companies, fintech and SaaS companies and B2C and quick-commerce businesses. Budget ownership: the CFO, finance head, or controller signs from the finance-operations or software budget when manual processing, control gaps, or growth create urgency. Access is constrained by Legacy ERP integration, data-quality and interoperability problems, SME price sensitivity, cybersecurity and data-governance concerns, and fragmented finance processes can delay adoption. India's e-invoicing requirements also increase implementation and compliance complexity, which lengthen the sales cycle.

MARKET OPPORTUNITY - ANALYST VIEW

The opportunity is supported by clear demand drivers - scale and cost pressure → D2C, quick-commerce, manufacturing, and restaurants need faster invoice processing across suppliers and outlets, and cloud and payment integration → APIs, UPI, banking connectivity, and ERP integrations make continuous finance automation more practical. It is constrained by Legacy ERP integration, data-quality and interoperability problems, SME price sensitivity, cybersecurity and data-governance concerns, and fragmented finance processes can delay adoption. India's e-invoicing requirements also increase implementation and compliance complexity. Before scale can be judged, the number of addressable customers, price and unit economics and evidence that customers commit need to be established.

INFORMATION TO PREPARE

1. Identify the initial customer segment, use case and geography the company is prioritising, and why that one first.
2. Provide the sizing inputs - (1) addressable accounts; (2) annual contract value per account - each with its source and the date it was measured. Any existing market sizing, with its figures, method and sources.
3. State how the relevant market is growing: the market definition, geography, period and source.
4. Describe the buying process: decision-makers, budget owner, and typical cycle length from first contact to contract.
5. State which markets or customer types regulation currently lets the company sell into, which it keeps closed until an approval is obtained, and any licence or permit a customer itself needs to buy or deploy the product.
6. Describe the next segment, geography, use case or product after the beachhead, and the evidence for it.

Competitive landscape

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

COMPETITIVE STRUCTURE

Customers who need to ensure invoices, expenses, accounting, and business payments are processed accurately and on time choose between continuing with their current way of working (manual finance operations using spreadsheets and email), extensions of incumbent suppliers' offerings (Tally Solutions, Zoho and SAP) and like-for-like systems (ERPNext). ERPNext offers a directly comparable solution.

KEY COMPETITORS & ALTERNATIVES

Alternative	Category	Offering	Why it is in the comparison
Manual finance operations using spreadsheets and email	The customer's current way of working	Manual invoice, expense, accounting, and payment processing.	Mysa must displace spreadsheet, email, and manual approval workflows in a buyer's first automation decision.
Tally Solutions	Extensions of incumbent suppliers' offerings	Business accounting and ERP software.	Tally can retain the accounting system of record while customers add or expand its native finance capabilities instead of adopting Mysa broadly.
Zoho	Extensions of incumbent suppliers' offerings	Cloud accounting, invoicing, expenses, and business software.	Zoho can extend existing accounting and expense capabilities across a customer account, reducing the need for a separate AP automation layer.
SAP	Extensions of incumbent suppliers' offerings	Enterprise ERP, finance, procurement, and business software.	SAP can absorb additional AP and procurement requirements inside an existing enterprise deployment during a finance-stack decision.
Oracle NetSuite	Extensions of incumbent suppliers' offerings	Cloud ERP with financial management and procurement.	NetSuite can expand its existing ERP footprint to cover finance workflows that a prospect might otherwise purchase from Mysa.
Microsoft Dynamics 365	Extensions of incumbent suppliers' offerings	ERP and financial management software.	Microsoft can extend an existing Dynamics environment into AP and finance operations instead of the buyer adding Mysa.
ERPNext	Like-for-like systems	Open-source ERP with accounting and business operations.	ERPNext can serve as the primary operational and finance system for a buyer that would otherwise combine an ERP with Mysa.

HOW CUSTOMERS MAY CHOOSE

Dimension	Mysa	Tally Solutions	Zoho	SAP	Oracle NetSuite
Functional coverage Buyers compare coverage across accounts payable, procurement, accounting, expenses, banking, and payment workflows	Not established	Mysa identifies Tally as an accounting-system integration target; retrieved evidence lacks full alternative functionality detail.	Mysa identifies Zoho Books as an accounting-system integration target; retrieved evidence lacks full alternative functionality detail.	Mysa identifies SAP-related legacy ERP systems as integration context; retrieved evidence lacks full alternative functionality detail.	Mysa identifies NetSuite as an ERP integration target; retrieved evidence lacks full alternative functionality detail.

Comparable evidence on Manual finance operations using spreadsheets and email, Microsoft Dynamics 365 and ERPNext has not been established for these criteria. Automation level, integration with existing systems, implementation time, enterprise readiness and performance / throughput are not established for any party.

COMPETITIVE POSITION

Mysa's relative position cannot yet be evidenced: the comparison against its alternatives is not established. Comparable evidence on the alternatives is limited to Microsoft Dynamics 365, ERPNext and Tally Solutions. Relative integration with existing systems, implementation time and enterprise readiness are not established.

DEFENSIBILITY - EMERGING / POTENTIAL SOURCES

- Customer base and usage data: these build only with paying customers.
- Protected technology: no patent position is established, so defensibility currently rests on know-how and execution.

INFORMATION TO PREPARE

1. Which alternatives prospective customers weigh, and the criteria that decide the choice.
2. Comparative cost, performance and reliability data against the main alternatives.
3. What would prevent a larger supplier from replicating the offering, and the protection in place.

Funding history

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

FINANCING POSITION

Mysa has completed a USD 2.8m Seed round (February 2025) and a USD 3.4m Pre-Series A (January 2026). A financing event, undated was also reported; its completion has not been confirmed. Reported financing totals USD 6.2m across Pre-Series and Seed rounds (2025–2026); no lead investor is named.

FUNDING TIMELINE

Date	Financing	Amount	Investors / providers	Key details
Undated	Financing event, undated	Not disclosed	Not disclosed	-
February 2025	Seed	USD 2.8m	Blume Ventures, Antler, Emphasis Ventures (EMVC), IIMA Ventures and Neon Fund	-
January 2026	Pre-Series A	USD 3.4m	Blume Ventures, Piper Serica, Ikemori Ventures, Raise Financial Services, QED Innovation Labs, Antler, IIMA Ventures and Neon Fund	Intended use: expansion of Mysa's AI-driven finance platform and modernization of ERP and fragmented banking operations; exact allocation not publicly disclosed.

Total funding USD 6.2m across Pre-Series and Seed rounds (2025–2026); no lead investor is named

INVESTORS & CAPITAL PROVIDERS

Named investors include Blume Ventures, Emphasis Ventures (EMVC), IIMA Ventures, Neon Fund, Piper Serica and Ikemori Ventures. The investors in 1 of 3 financings have not been disclosed. No lead or institutional investor has been named.

INFORMATION TO PREPARE

1. Current cash position, monthly burn and runway.
2. Any current or planned raise: amount, status, investors and intended use of the new capital.

Investor questions & information to prepare

BASE COUNTRY **India** FOUNDED **2023** STAGE **Pre-Series A** SECTOR **Fintech · AI powered finance operations and business banking software** CUSTOMER MODEL **B2B · enterprise**

CONCERNS & CONFLICTS

Is any adverse event publicly reported, and where do sources disagree?

No public Concern or source Conflict is recorded in this baseline.

Part A lists the questions an investor is likely to raise after reviewing the public record; Part B lists the documents and data that evidence them. Records such as the cap table, management accounts and agreements are normally private: diligence requests them as standard, not because their absence from public sources is a concern.

A. QUESTIONS TO PREPARE FOR

No.	Information / clarification required	Why it matters
Customers & commercial traction		
1	Revenue by customer, concentration of the largest customers, retention and expansion over the last two years, and the typical sales cycle.	At this stage the investment case rests on revenue quality, which public sources do not show.
Business model & economics		
2	Revenue quality: what drives growth, how retention and expansion differ by customer cohort, and the payback on sales and marketing spend.	Recurring-revenue quality is the core of a subscription business.
3	How the company charges: pricing basis, typical contract size and term, and who pays.	No pricing is public; price and contract terms set the revenue model.
Financial position		
4	Revenue for the last financial year and the year to date, gross margin, operating costs, burn and runway.	Reported revenue needs the financial statements behind it.
Market & go-to-market		
5	Which segment and geography the company is prioritising - among mid-sized businesses, D2C and manufacturing companies, fintech and SaaS companies and other segments - why that one first, and how many qualifying sites or customers it counts there.	Research lists several target segments; the first one sets the sales cycle, reference customers and capital need.
6	The buying process in the target segment: budget owner, decision-makers, procurement steps and time from first contact to order.	Enterprise purchases involve several functions; the observed cycle sets how fast orders can follow.
Funding & capital structure		
7	Lead and major investors in each financing and the instruments used.	No lead investor is named in the record.
8	Current fundraising: amount sought, capital already committed, use of funds, and the technical and commercial milestones it is meant to reach.	Links the investment to specific milestones.
Product & technology		
9	Operating performance of the current offering over the last 12 months: reliability, uptime or service levels, and material incidents.	Shows whether the offering performs consistently at scale.
10	Certification or qualification required for customer operation, its current status and what remains.	Determines when the product can be sold and used.
11	What is protected: patents or applications filed, and ownership of the core technology.	No patent position is established; defensibility depends on what the company owns and can protect.
Competition & defensibility		
12	Alternatives actually weighed in customer discussions to date (for example continuing with manual finance operations using spreadsheets and email, or direct alternatives such as ERPNext), why the customer chose or would choose the company, what would stop a competitor replicating the offering, and any comparative cost or performance evidence.	Only buyer decisions show which alternatives compete; public research shows the field, not the customer's shortlist.

No.	Information / clarification required	Why it matters
Founders, team & organisation		
13	Current headcount by function and the key hires planned, including who leads enterprise sales.	Senior roles are held by the founders; the next stage needs sales and delivery capacity.
Corporate & ownership		
14	Ownership of the company: founders' shareholdings, option pool, founder vesting, and rights attached to the 2025-2026 financings.	Determines founder incentives and the rights a new investor would rank alongside.
15	The legal entity behind the company - registered name, jurisdiction and registration number - and that it is active.	Financing, contracts and intellectual property attach to a specific legal entity.
Legal, regulatory & compliance		
16	Licences or regulatory permissions held or required, and the compliance and AML / KYC arrangements.	Regulated activity cannot scale without them.

B. SUPPORTING DOCUMENTS & DATA TO PREPARE

Priority - initial review

Secondary - follow-up

Corporate, legal & ownership

- Certificate of incorporation and memorandum and articles of association.
- Shareholders' agreement and any investor side letters.

Financial information

- Financial statements for the last two to three financial years, audited where available.
- Current-year management accounts (P&L, balance sheet, cash flow), latest cash balance, monthly burn and runway.
- Budget and financial forecast to the next funding milestone, with key assumptions.
- Key metrics pack: ARR / MRR and growth, gross and net revenue retention, churn, CAC and payback, gross margin.

Customers & commercial

- Customer list with revenue by customer and concentration of the largest customers.
- Material customer contracts.
- Retention, churn and expansion data by customer cohort.
- Pipeline report (CRM extract) and order book.
- Standard commercial terms and price list.
- Customer reference contacts.

Product & technology

- Product and technical roadmap to the next milestones.
- Product analytics and uptime or incident reports.
- Technical architecture, with critical dependencies and third-party technology.
- Security and data-protection documentation.

Intellectual property

- Schedule of patents, applications and trademarks, or confirmation that none has been filed.
- IP assignment agreements from founders, employees and contractors.
- Schedule of material open-source and third-party software licences.

Organisation & people

- Organisation chart and headcount by function, with the hiring plan for the next 12-18 months.
- Service agreements of the founders and key staff.
- Option plan (ESOP) and grants to date.

Funding & securities

- Fully diluted cap table.
- Signed financing agreements for each reported 2025-2026 financing.
- Current fundraising materials (investor presentation and use-of-funds plan).

Regulatory / sector-specific

- Licence certificates, compliance policies and AML / KYC procedures.

ABOUT THIS SCREEN

Independent public-source assessment showing how the company may initially appear to an investor, before founder clarification, supporting evidence or private diligence. It is intentionally the external, public-source view: information that public sources do not establish may still exist within the company.

- Evidence is limited to publicly observable sources at the time of research.
- This baseline is prepared from reviewed public sources before founder enrichment. Founder confirmations, corrections and supporting evidence are recorded separately and never silently overwrite it.

Research window: 3 February 2026 – 3 February 2026
